# **Cosmetic Dentistry**

#### INTRINSIC STAINS

Stains beneath the tooth enamel are known as **intrinsic stains.** This type of staining is commonly caused by:

- Aging
- · Defects within the tooth
- · Use of certain antibiotics during tooth development
- Smoking

Also, your diet can affect the brightness of your smile. The following foods and beverages often cause tooth stains:

- Tobacco products
- Coffee
- Tea
- · Red wine
- · Colored juices
- Curry
- Soy
- · Cola drinks
- · Minerals in well water

### WHITENING OPTIONS

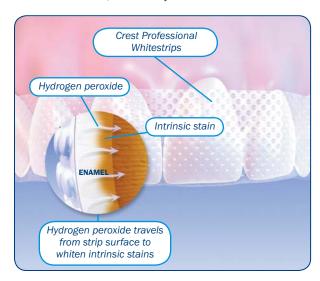

If you are concerned about the color of your teeth, ask your dentist or hygienist about various options for tooth whitening, including:

#### CREST PROFESSIONAL WHITESTRIPS

Whitening Technology that gives you noticeably whiter teeth

- Crest<sub>®</sub> Whitestrips contain hydrogen peroxide, which gets at stains beneath the tooth surface
- Thin, clear, flexible strips adhere directly to teeth
- Just 30 minutes, twice a day for 3 weeks
